

CHAPTER – 7

Ranking Test

In this, generally the ranks of a person both from the top and from the bottom are mentioned and the total number of persons is asked. However, sometimes this question is put in the form of a puzzle of interchanging seats by two persons.

Ex.1 Rahul ranked ninth from the top and thirty eighth from the bottom in a class. How many students are there in the class?

- (a) 45 (b) 46 (c) 47 (d) 48

Sol. Clearly, the whole class consists of:

- (i) 8 students who have a rank higher than Rahul;
- (ii) Rahul; and
- (iii) 37 students who have rank lower than Rahul.

i.e., $(8 + 1 + 37) = 46$ students.

Hence, the answer is (b).

Ex.2 In a row of 21 girls, when Monika was shifted by four places towards the right, she became 12th from the left end. What was her earlier position from the right end of the row?

- (a) 9th (b) 10th (c) 11th (d) 12th (e) 14th

Sol. The change of place by Monika can be shown as under

1 2 3 4 5 6 7 8 9 10 11 M 13 14 15 16 17 18 19 20 21

Clearly, Monika's earlier position was 8^{th} from the left end and 14^{th} from the right end. Hence, the answer is (e).

Ex.3 In a row of boys, Deepak is seventh from the left and Madhu is twelfth from the right. If they interchange their positions, Deepak becomes twenty-second from the left. How many boys are there in the row?

- (a) 19 (b) 31 (c) 33 (d) Cannot be determined
- (e) None of these

Sol. Deepak's new position is 22nd from left. But it is the same as Madhu's earlier position which is 12th from the right.

Thus, the row consists of $(21 + 1 + 11) = 33$ boys.

Hence, the answer is (c).
